Mr Amit Patel  
Mr Francesc Malagelada – Clinical Lead F&A

Limb Reconstruction Team Consultants : Mr Alex Vris  
Mr Alexios Iliadis  
Mr Kavi Patel

### Background :

Barts Health is one of the largest NHS trusts in the UK with over 16,000 staff treating over 2.5 million people in East London and beyond. Barts Bone & Joint Health provides orthopaedic care across three sites; The Royal London Hospital - one of the busiest trauma centres in Europe, Barts Health Orthopaedic Centre – a dedicated, GIRFT accredited, elective orthopaedic unit in Newham and Whipps Cross Hospital – a specialist fragility fracture unit.

This fellowship is uniquely equipped to provide a full exposure to all aspects of F&A trauma and elective care. The Royal London Hospital provides Level 1 trauma experience with high volumes of complex F&A trauma, as well as the opportunity to maintain general trauma skills. We work closely with our Limb Reconstruction colleagues and orthoplastic teams to provide world class trauma care for the full spectrum of F&A trauma, including complex articular and open injuries. Whipps Cross is home to our dedicated fragility fracture service where there is exposure to complex fragility fractures, often in multiply co-morbid patients and thus providing a different breadth of exposure and decision-making.

Electively, we have our dedicated, GIRFT accredited orthopaedic elective site at BHOC, as well as elective capacity for complex medical patients at both the Royal London and Whipps Cross Hospitals. Fellows will have experience of all aspects of elective F&A work ranging from common forefoot/midfoot conditions including MIS techniques to complex deformity correction, diabetic foot care and total ankle arthroplasty.

The F&A service is currently run by four substantive, fellowship trained F&A surgeons and continues to grow to meet the demands of the service. The fellowship can be tailored towards the individual needs of the incoming fellows and offers a significant degree of versatility in training. The fellow will have the opportunity to run independent operating lists, initially in parallel with the Consultant team. Cases will be carefully selected and planned to suit the needs and skill-set of the fellow.

The fellow will gain Consultant experience in covering the Whipps Cross On-Call and Trauma Surgeon of the Week rotas, with top cover for support if needed.

Fellows will be expected to engage in both research and quality improvement, with the unit's support in optimising their CVs for consultant applications. The fellow is responsible for running the combined MDT with the limb reconstruction team, as well as the quarterly regional F&A MDT for the North East London Integrated Care System (NEL ICS).

The fellow timetable varies from week to week but on average they can expect 3 full days operating and 2 clinics per week.

### **Fellowship Essentials**

Candidates are expected to be Post CCT or equivalent.

International candidates are very welcome.

Fellowships are offered as 6-12 month rotations and are often advertised 12-18 months prior to start date.
