

This one-year Fellowship is based across two hospital sites; Frimley Park and Royal Surrey County (Guildford) NHS Trusts, joining a team of 4 consultant trainers and their colleagues, all specialising in foot and ankle surgery. The post is for senior trainee surgeons already committed to the sub-speciality.

Exposure to the full range of foot and ankle orthopaedics is extensive. As well as the commoner pathologies and procedures, each consultant trainer has particular areas of interest, thus presenting opportunities to learn about complex fractures, recalcitrant heel pathologies, the diabetic foot, ankle joint replacement and paediatric foot problems. The post entails supervised training in specialist clinics and operating, large-volume independent operating, and research opportunities. The foot and ankle fellow would be expected to teach on local courses run out of the state-of-the-art Minimal Access Therapy Unit, which includes the University of Surrey cadaveric workshop.
